Color Properties

<u>color</u>

Sets the color of text

opacity

Sets the opacity level for an element

Background and Border Properties

background

Sets all the background properties in one declaration

background-attachment

Sets whether a background image is fixed or scrolls with the rest of the page

background-color

Sets the background color of an element

background-image

Sets the background image for an element

background-position

Sets the starting position of a background image

background-repeat

Sets how a background image will be repeated

background-clip

Specifies the painting area of the background

background-origin

Specifies the positioning area of the background images

background-size

Specifies the size of the background images

border

Sets all the border properties in one declaration

border-bottom

Sets all the bottom border properties in one declaration

border-bottom-color

Sets the color of the bottom border

border-bottom-left-radius

Defines the shape of the border of the bottom-left corner

border-bottom-right-radius

Defines the shape of the border of the bottom-right corner

border-bottom-style

Sets the style of the bottom border

border-bottom-width

Sets the width of the bottom border

border-color

Sets the color of the four borders

border-image

A shorthand property for setting all the border-image-* properties

border-image-outset

Specifies the amount by which the border image area extends beyond the border box

border-image-repeat

Specifies whether the image-border should be repeated, rounded or stretched

border-image-slice

Specifies the inward offsets of the image-border

border-image-source

Specifies an image to be used as a border

border-image-width

Specifies the widths of the image-border

border-left

Sets all the left border properties in one declaration

border-left-color

Sets the color of the left border

border-left-style

Sets the style of the left border

border-left-width

Sets the width of the left border

border-radius

A shorthand property for setting all the four border-*-radius properties

border-right

Sets all the right border properties in one declaration

border-right-color

Sets the color of the right border

border-right-style

Sets the style of the right border

border-right-width

Sets the width of the right border

border-style

Sets the style of the four borders

border-top

Sets all the top border properties in one declaration

border-top-color

Sets the color of the top border

border-top-left-radius

Defines the shape of the border of the top-left corner

border-top-right-radius

Defines the shape of the border of the top-right corner

border-top-style

Sets the style of the top border

border-top-width

Sets the width of the top border

border-width

Sets the width of the four borders

box-shadow

Attaches one or more drop-shadows to the box

Basic Box Properties

bottom

Specifies the bottom position of a positioned element

clear

Specifies which sides of an element where other floating elements are not allowed

clip

Clips an absolutely positioned element

display

Specifies how a certain HTML element should be displayed

float

Specifies whether or not a box should float

height

Sets the height of an element

left

Specifies the left position of a positioned element

overflow

Specifies what happens if content overflows an element's box

overflow-x

Specifies whether or not to clip the left/right edges of the content, if it overflows the element's content area

overflow-y

Specifies whether or not to clip the top/bottom edges of the content, if it overflows the element's content area

padding

Sets all the padding properties in one declaration

padding-bottom

Sets the bottom padding of an element

padding-left

Sets the left padding of an element

padding-right

Sets the right padding of an element

padding-top

Sets the top padding of an element

position

Specifies the type of positioning method used for an element (static, relative, absolute or fixed)

right

Specifies the right position of a positioned element

top

Specifies the top position of a positioned element

visibility

Specifies whether or not an element is visible

width

Sets the width of an element

vertical-align

Sets the vertical alignment of an element

z-index

Sets the stack order of a positioned element

Flexible Box Layout

align-content

Specifies the alignment between the lines inside a flexible container when the items do not use all available space.

<u>align-items</u>

Specifies the alignment for items inside a flexible container.

align-self

Specifies the alignment for selected items inside a flexible container.

display

Specifies how a certain HTML element should be displayed

flex

Specifies the length of the item, relative to the rest

flex-basis

Specifies the initial length of a flexible item

flex-direction

Specifies the direction of the flexible items

flex-flow

A shorthand property for the flex-direction and the flex-wrap properties

flex-grow

Specifies how much the item will grow relative to the rest

flex-shrink

Specifies how the item will shrink relative to the rest

flex-wrap

Specifies whether the flexible items should wrap or not

justify-content

Specifies the alignment between the items inside a flexible container when the items do not use all available space.

margin

Sets all the margin properties in one declaration

margin-bottom

Sets the bottom margin of an element

margin-left

Sets the left margin of an element

margin-right

Sets the right margin of an element

margin-top

Sets the top margin of an element

max-height

Sets the maximum height of an element

max-width

Sets the maximum width of an element

min-height

Sets the minimum height of an element

min-width

Sets the minimum width of an element

<u>order</u>

Sets the order of the flexible item, relative to the rest

Text Properties

hanging-punctuation

Specifies whether a punctuation character may be placed outside the line box

hyphens

Sets how to split words to improve the layout of paragraphs

<u>letter-spacing</u>

Increases or decreases the space between characters in a text

<u>line-height</u>

Sets the line height

tab-size

Specifies the length of the tab-character

text-align

Specifies the horizontal alignment of text

text-align-last

Describes how the last line of a block or a line right before a forced line break is aligned when text-align is "justify"

text-indent

Specifies the indentation of the first line in a text-block

text-justify

Specifies the justification method used when text-align is "justify"

text-transform

Controls the capitalization of text

white-space

Specifies how white-space inside an element is handled

word-break

Specifies line breaking rules for non-CJK scripts

word-spacing

Increases or decreases the space between words in a text

<u>word-wrap</u>

Allows long, unbreakable words to be broken and wrap to the next line

Text Decoration Properties

text-decoration

Specifies the decoration added to text

text-decoration-color

Specifies the color of the text-decoration

text-decoration-line

Specifies the type of line in a text-decoration

text-decoration-style

Specifies the style of the line in a text decoration

text-shadow

Adds shadow to text

text-underline-position

Font Properties

font

Sets all the font properties in one declaration

font-family

Specifies the font family for text

font-size

Specifies the font size of text

font-style

Specifies the font style for text

font-variant

Specifies whether or not a text should be displayed in a small-caps font

font-weight

Specifies the weight of a font

@font-face

A rule that allows websites to download and use fonts other than the "web-safe" fonts

font-size-adjust

Preserves the readability of text when font fallback occurs

font-stretch

Selects a normal, condensed, or expanded face from a font family

Writing Modes Properties

direction

Specifies the text direction/writing direction

unicode-bidi

Used together with the <u>direction</u> property to set or return whether the text should be overridden to support multiple languages in the same document

Table Properties

border-collapse

Specifies whether or not table borders should be collapsed

border-spacing

Specifies the distance between the borders of adjacent cells

caption-side

Specifies the placement of a table caption

empty-cells

Specifies whether or not to display borders and background on empty cells in a table

table-layout

Sets the layout algorithm to be used for a table

Lists and Counters Properties

counter-increment

Increments one or more counters

counter-reset

Creates or resets one or more counters

list-style

Sets all the properties for a list in one declaration

list-style-image

Specifies an image as the list-item marker

list-style-position

Specifies if the list-item markers should appear inside or outside the content flow

list-style-type

Specifies the type of list-item marker

Animation Properties

@keyframes

Specifies the animation

animation

A shorthand property for all the animation properties below, except the animation-play-state property

animation-delay

Specifies when the animation will start

animation-direction

Specifies whether or not the animation should play in reverse on alternate cycles

animation-duration

Specifies how many seconds or milliseconds an animation takes to complete one cycle

animation-fill-mode

Specifies what values are applied by the animation outside the time it is executing

animation-iteration-count

Specifies the number of times an animation should be played

animation-name

Specifies a name for the @keyframes animation

animation-timing-function

Specifies the speed curve of the animation

animation-play-state

Specifies whether the animation is running or paused

Transform Properties

backface-visibility

Defines whether or not an element should be visible when not facing the screen

perspective

Specifies the perspective on how D elements are viewed

perspective-origin

Specifies the bottom position of D elements

transform

Applies a D or D transformation to an element

transform-origin

Allows you to change the position on transformed elements

transform-style

Specifies how nested elements are rendered in D space

Transitions Properties

transition

A shorthand property for setting the four transition properties

transition-property

Specifies the name of the CSS property the transition effect is for

transition-duration

Specifies how many seconds or milliseconds a transition effect takes to complete

transition-timing-function

Specifies the speed curve of the transition effect

transition-delay

Specifies when the transition effect will start

Basic User Interface Properties

box-sizing

Allows you to define certain elements to fit an area in a certain way

.

content

Used with the :before and :after pseudo-elements, to insert generated content

cursor

Specifies the type of cursor to be displayed

icon

Provides the author the ability to style an element with an iconic equivalent

nav-down

Specifies where to navigate when using the arrow-down navigation key

nav-index

Specifies the tabbing order for an element

nav-left

Specifies where to navigate when using the arrow-left navigation key

nav-right

Specifies where to navigate when using the arrow-right navigation key

nav-up

Specifies where to navigate when using the arrow-up navigation key

outline

Sets all the outline properties in one declaration

outline-color

Sets the color of an outline

outline-offset

Offsets an outline, and draws it beyond the border edge

outline-style

Sets the style of an outline

outline-width

Sets the width of an outline

resize

Specifies whether or not an element is resizable by the user

text-overflow

Specifies what should happen when text overflows the containing element
